

TTARTISAN

macOS System

TTARTISAN Lens Profile Guide

Installation Guide

- 1. Press Command + Space and enter the following path:
Path: ~/Library/Application Support/Adobe/CameraRaw/LensProfiles/1.0
- 2. Copy the downloaded .lcp lens profile file into the folder.
- 3. Restart Photoshop or Lightroom.

User Guide

▲ Correcting RAW Images in Photoshop

- 1. Drag the image into Photoshop. Camera Raw will open automatically.
- 2. Go to: [Optics] → check [Use Profile Corrections] →
[Make]: select TTARTISAN → [Model]: select the corresponding lens →
[Profile]: select the corresponding lens to apply the correction.

▲ Correcting RAW Images in Lightroom

- 1. Import the image into Lightroom, then select [Develop].
- 2. Go to: [Lens Corrections] → check [Enable Profile Corrections] →
[Make]: select TTARTISAN → [Model]: select the corresponding lens →
[Profile]: select the corresponding lens to apply the correction.

▲ Correcting JPG Images in Photoshop

- 1. Drag the image into Photoshop.
- 2. Go to: [Filter] → [Lens Correction] → [Camera Make]: select TTARTISAN →
[Camera Model]: select the corresponding lens →
[Lens Model]: select the corresponding lens to apply the correction.

Note: Lightroom cannot correct JPG images.
Photoshop JPG correction may produce errors and is not recommended.
